Beth D'Amato, CSM
Software Engineer

Supportive and enthusiastic software engineer interested in collaborating with like-minded team members to develop quality applications, troubleshoot problems and assist in the timely completion of projects. I offer my strong communication skills and professional acumen, and value mentoring environments to help promote personal growth.

TECHNICAL TOOLS

JavaScript, React.js, Redux, RESTful APIs, Python, HTML/CSS, Node.js, Git, Docker, Apache Cassandra, CQL, PostgreSQL, Amazon EC2, Kanban/JIRA Agile

EMPLOYMENT

DataStax   Associate Solutions Engineer   Dec 2018 - present
Atlanta, GA (remote)

As an Agile Certified Scrum Master on the customer facing, Vanguard pre-sales team, I help build engaging, front-end demonstrations that showcase best practices around design and adoption of Apache Cassandra database solutions. I collaborate with senior team members to qualify demo requirements and prospect/customer needs, and effectively illustrate the company's ability to meet those needs. Continually invest in my knowledge of the software development lifecycle methodology including Agile development, code standards and reviews, source control management, build processes, testing and operations.

DigitalCrafts (temporary)   Developer-In-Residence (TA/mentor)   Dec 2018 - present
Atlanta, GA

Worked closely with the cohort instructor to help convey programming fundamentals to students. Held office hours after class to assist students with questions and work through syntax/logic problems. Conducted webinars on relevant coding topics. Represented the company in the community by attending meetings and lectures, posting relevant blog articles, and exchanging best practices.

(career pivot in 2018)   Senior Executive Assistant   Aug 1994 - Apr 2018

Over 24 years of senior administrative experience in the finance, technology, media, and management consulting industries. Demonstrated capacity to provide comprehensive support for executive-level management. Able to identify goals and priorities and strategically resolve issues. Excellent communication and public speaking skills.

PROJECTS

GeoFinder
Reactjs/Redux/Material-UI, DataStax Enterprise (Cassandra), Apache Solr   *http://github.com/badamato/dse-geofinder*
This DataStax tool demonstrates the company's DSE Search capabilities via a geospatial narrative. Users can perform full-text or faceted CQL queries, the syntax of which, is displayed in real-time to highlight Cassandra's unique parameter structure. By design, the UI is simple and user-friendly to specifically supplement the DataStax backend technology.

Multi-Cloud
Reactjs/Redux/Material-UI, DataStax Enterprise (Cassandra) and OpsCenter   *http://github.com/badamato/dse-uptime-demo*
This DataStax application demonstrates the company's always-on, distributed, hybrid-cloud, database technology. This alternate view of DataStax's OpsCenter tool, helps users envision DSE's ability to be continuously available under any circumstance. Menu choices allow for individual scenarios of taking down a single node, a full datacenter, performing a rolling-restart, and more without transactional read/write interruption or latency.

Gear Shakedown
Reactjs/Nodejs/Express/PostgreSQL, REST API, Bcrypt Hash, AWS   *http://github.com/badamato/react-shakedown-app*
Shakedown was built to assist hiking enthusiasts by determining appropriate pack weight or taking inventory of their existing gear.

EDUCATION

DigitalCrafts - Atlanta, GA   University of Kansas
Full-Stack Web Development   *Bachelor of Arts, Theatre & Film*
